# ENVIRONMENTAL SOFTWARE SYSTEMS, Volume 8

## SECOND EDITION

This volume contains a newly compiled version of the Proceedings of the 8<sup>th</sup> International Symposium on Environmental Software Systems 2009 (ISESS 2009), published by the International Federation for Information Processing (IFIP).

The original version was a USB with individual PDF articles linked together. This SECOND EDITION contains the complete proceedings as one document and has been produced with permission of the copyright holder, IFIP and IFIP WG5.11 “Computers and Environment”.

The intention behind creating this SECOND EDITION was to make those volumes of ENVIRONMENTAL SOFTWARE SYSTEMS easily available on-line which are not available through a commercial publisher.

This edition has been created based on the original PDFs on the USB. A table of contents and dividing pages between the chapters have been added. Where easily possible, a few technical and printing errata have been corrected during compilation.

Note that in the original TOC some papers seem to appear in the wrong section. However I have kept the original order synchronous with the USB, with the exception of the workshop papers, which have been moved to the last setion.

This edition is permanently available at

<http://www.enviromatics.org/isess/2009.ISESS.Proceedings.pdf>

The original USB version is permanently available at

**IFIP Conference Series**

## **IFIP – The International Federation for Information Processing**

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists the development, exploitation and application of information technology for the benefit of all people.

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- open conferences;
- working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is less rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is in information may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

# TABLE OF CONTENTS

## PREFACE AND INTRODUCTION

Introduction .....	2
--------------------	---

## SOFTWARE SYSTEMS FOR POLICY ANALYSIS

Connectivity of integrated environment and health systems with research synergies and in support to policies <i>Pavlos Kassomenos, Andreas N. Skouloudis</i> .....	4
An emulation modelling approach to reduce the complexity of a 3D hydrodynamic-ecological model of a reservoir <i>A. Castelletti, M. De Zaiacomo, S. Galelli, B. M. Restelli, P. Sanavia, R. Soncini-Sessaa, J.P. Antenucci</i> .....	13
Energy and climate: a software system to support and measure local policies <i>Giulia Fiorese, Giorgio Guariso</i> .....	23
Climate twins – a climate change exploration tool, identifying future climate - current climate region pairs to learn how to adapt to climate change <i>Wolfgang Loibl, Jan Peters-Anders</i> .....	35
Recycled E-Waste as Environmental Sensors to Enable Urban Agriculture <i>Tom Igoe, Mark Hansen, Nick Bilton, Kate Hartman, Rebecca Bray, Kati London</i> .....	42
The ICT-ENSURE European Research Area Project in the Field of ICT for Environmental Sustainability and Its Research Programmes Information System <i>W. Geiger, R. Lutz, L. Maurer, W. Pillmann, C. Schmitt, K. Tochtermann</i> .....	55
Experiences in Designing An Online Community to Facilitate Education for Sustainable Development <i>Timothy Maciag, Roger Petry, Curt Schroeder, Daryl Hepting</i> .....	64
Water Quality Modeling and Loads Estimation in a Large Reservoir <i>C. Lindim, J.L. Pinho, J.M.P. Vieira</i> .....	78

## **SENSOR WEBS AND SENSOR NETWORKS**

Introduction to the Challenges of Plug and Measure in Environmental Sensor Networks <i>Johannes Schabauer, Denis Havlik</i> .....	91
High Spatial Resolution Sensor Networks for Air Quality Monitoring <i>David G. Rickerby, Andreas N. Skouloudis, Alessandra M. Serventi</i> .....	100

## **HUMAN FACTORS IN ENVIRONMENTAL INFORMATION SYSTEMS**

Push versus pull Environmental Information Systems <i>Raul Carlson</i> .....	112
Auditory Representation of Environmental Data <i>Steven P. Frysinger</i> .....	122

## **OPEN SOURCE SOFTWARE AND INTER-OPERABILITY**

Improving Lake Winnipeg Integrated Environment Modelling with OpenMI <i>W.G. Booty, I.W. Wong, R.C. McCrimmon, D.C.-L. Lam, P. Fong</i> .....	133
HydroPlatform.org - a generic open-source software interface and web repository for water management models <i>J. Harou, D. Pinte, K. Hansen, D. Rosenberg, A. Tilmant, J. Medellín-Azuara, M. Pulido-Velazquez, D. Rheinheimer, E. Matrosov, T. Zhu, A. Reynaud, B. Kock, S. Vicuna</i> .....	146
Geo-referenced Time series Viewer (GTV) <i>Peter Kutschera, Gerald Schimak</i> .....	160
Development of an Open Source Software Framework as a Basis for Implementing Plugin-Based Environmental Management Information Systems (EMIS) <i>Volker Wohlgemuth, Matthias Mäusbacher, Tobias Schnackenberg, Dominik Panic</i> .....	171
Technology Transfer: “WaterBase” MWSWAT setup for a Pilot Watershed in El Salvador <i>M. C. Mena, L. E. Chipagua, L.F. Leon and D.A. Swayne</i> .....	181

## **WATER QUALITY SOFTWARE SYSTEMS**

Assessing Water Quality and Diagnosing the Sources of Problems through a Water Quality Indicator Web Service <i>Simon Hood, Alex Storey, David Swayne, Mirena Celina Mena de Alonzo, Ana Deisy Lopez Ramos</i> .....	193
---	-----

Process Analysis and Geovisualization Support of Emergency Management <i>J. Racek, J. Ministr, T. Ludik, E. Mulickova, P. Kubicek</i> .....	202
SECPM Framework – Innovative Paradigm to Parameterize Spatiotemporal Chlorophyll Concentration Profile in the James River Estuary, Virginia, USA using MODIS Satellite Imagery and In-situ Characteristics <i>Kwisun Park Yu, Jaewan Yoon</i> .....	212
Spatio-temporal modeling by field computers with GPS <i>Lubos Matejicek, Jana Konradova</i> .....	222

## CLIMATE CHANGE SOFTWARE SYSTEMS

Enabling Information Technology for the Emancipation of Physical and Natural Capital <i>Roger Petry, Daryl Hepting</i> .....	233
Deployment of new technologies for the abatement of atmospheric pollution and characterisation of health effects <i>Andreas N. Skouloudis, David G. Rickerby, Maria-Cristina Carotta</i> .....	246
High performance computing in regionalization of global climate change scenarios <i>G. Smiatek</i> .....	254
Interactive Access to Climate Change Information <i>M. Wrobel, J. Hinkel, M. Hofmann, T. Nocke, K. Vohland</i> .....	263

## WORKSHOPS

From GIS & sensor data to Web maps <i>Ionut Iosifescu-Enescu, Marco Hugentobler, Lorenz Hurni</i> .....	275
Web-Based Delivery of Integrated Environmental Modelling <i>David Swayne</i> .....	276
